

**Exercise 13 (Cumulative): "Glue Pot"**

NAME: \_\_\_\_\_

**Revise the following passage for sentence structure, sentence structure, sentence fragments, comma splices, subject–verb and pronoun–antecedent agreement, pronoun reference, modifier errors, parallel structure, sentence combining.**

Excessive amounts of scrap and customer rejects has caused us to recommend three solutions to this. One, a new glue pot at a cost of \$6,500. A more favorable solution is repairing the existing glue pot for \$1,500 and then to purchase an International Glue Line Inspection System, the price for this system is \$4,000. The new glue line system will decrease scrap and customer rejects by 75 percent. The system will detect breaks in the glue line and ejects defective cartons from the run. If the system detects more than five consecutive rejects, it automatically stops the machine. In the first year of use, the cost savings will exceed \$10,000. More than covering the cost of rebuilding the glue pot and the new inspection system.
