InSite turnitin®

A service of iParadigms, LLC

AT A GLANCE

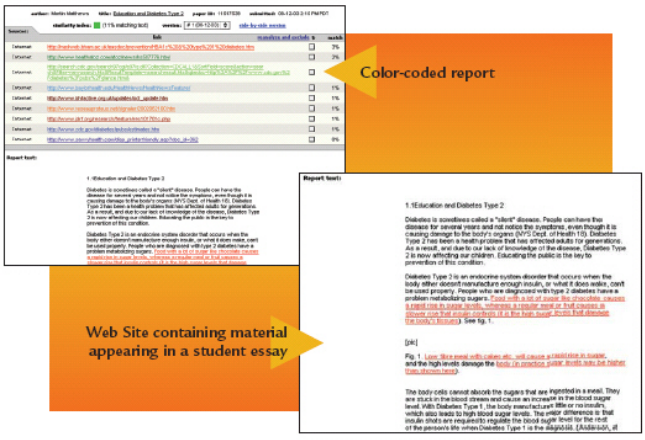
Turnitin's comprehensive originality checking tool allows students and instructors the opportunity to examine a student's research and writing practices. With same day response after submission, the student's paper will be returned either to the student or instructor with a color-coded report showing which passages are original work and which passages match identically with posted material on the internet.

WHAT ARE THE BENEFITS?

- **Extensive Source Databases**
  Submitted papers are checked against expanded searches of academic and professional content not available on the public internet, ensuring complete and thorough originality analysis.

- **Direct Source Comparison**
  Professors and students can compare matching passages of text in a paper with corresponding passages in the original source.

- **Creating Teaching Moments**
  The originality checker allows students and instructors the opportunity to query correct citation models prior to a paper's final due date.

- **Easy Implementation**
  Turnitin requires no installations or maintenance of additional software, and because it is completely web-based, compatibility between different computers and operating systems is never a problem.


- **Application Integration**
  Turnitin can be integrated with popular CMS packages like WebCT® and Blackboard®, eliminating the need to maintain separate accounts and user information for two services.
